

The IAR Theory of Human Dominance: One Program, Many Flags: The Anatomy, Encoding, Enforcement, and Liberation of All Forms of Dominance

Macharia Barii

September 6, 2026

Abstract

Racism is not the only program of its kind. It is one instance of a much older and much more general machine: *human dominance*. Sexism, classism, colonialism, ableism, ageism, religious bigotry, nationalism, hegemony, speciesism, and totalitarianism all run the same physics that this series proved for racism alone. This paper makes the generalization universal and mechanical. We define dominance as the systematic encoding of a lie into memory in order to destroy the theory of mind between groups; we show that its four-term vector — $\Theta_{\text{other}} \rightarrow 0$, λ weaponized, $\alpha \rightarrow 1$, $\theta \rightarrow 0$ — is invariant across all eleven forms; and we term the difference between forms nothing more than severity and writing strength, the only two parameters that vary. The companion engine `iar_dominance.py` runs all eleven members of the spectrum under one law and reports the same armed war-seed pattern for the forms whose dehumanization is total, and the same liberation—away from dehumanization, within a handful of years of institutional truth—for every member without exception. The universal call to action is therefore single: expose the lie, humanize the other, decode the memory, re-educate, re-balance power, and re-identify.

Motto: Dominance is the destruction of Theory of Mind. It is the systematic denial of the other's humanity. It is the encoding of a lie into the fabric of civilization. It is the foundation of power — and the seed of dissolution.

1 Introduction

A previous result in this series proved that racism is a physical configuration of an open system: a lie, written into the memory machinery of a society, that drives the perceived humanity of a target group to zero and leaves a war-seed behind in its memory. The present paper does something different with the same machinery. It asks whether racism is *special* or merely *first*. The answer it proves is: merely first. Sexism, classism, colonialism, ableism, ageism, religious bigotry, nationalism, hegemony, speciesism, and totalitarianism are the same program wearing different flags.

The evidence for the claim is not anecdotal; it is structural. Every form named above does the same six things. It marks a group as different (othering). It strips the group of perceived humanity (dehumanization). It writes the falsehood into the group's record through education, media, religion, law, memorials, science, and language (encoding). It uses law, force, and economy to hold the group in the place the lie assigns it (enforcement). It closes the channel of exchange so the lie cannot be refuted (isolation). And it keeps the manufactured fear above the dissolution threshold so that ordinary contact reads as a threat (fear). The names of the lie change; the machinery does not.

The plan of this paper follows the machinery. Section 2 lays out the framework in miniature. Section 3 defines dominance and its cascade. Section 4 dissects the six parameters as they are moved by a dominance program. Section 5 presents dominance as a system-optimization: a rational, optimal strategy for the dominant group — and therefore addressable, since what is optimized can be re-optimized. Section 6 runs the whole spectrum through the companion engine `iar_dominance.py` and reads the universal pattern from its output. Section 7 checks the theory against history. Section 8 derives the universal cure. Section 9 reads the modern record. Section 10 faces the standard objections to so sweeping a theory and answers each one in the framework’s own currency. Section 11 assembles the complete theorem, and Section 12 issues the universal call to action of the whole series.

2 The Framework in Miniature

The framework is carried over from the common definitions of the series and is restated here so that this paper stands alone.

Definition 1 (The IAR parameters). *The parameter set $\Theta = \{\beta, \gamma, \lambda, \eta, \alpha, \theta\}$ governs every interaction:*

- β : coupling — how hard the system is bound to its environment,
- γ : reaction accumulation — how fast a program spreads,
- λ : memory decay — how fast the system forgets,
- η : nonlinearity — fear, chaos, dissolution pressure,
- α : influence fraction — which party controls the channel,
- θ : exchange ratio — openness of the dialogue channel.

Definition 2 (State variables). *The system is followed through the action state X_C (the program being carried out), the open state X_O (the standing of the other party), and the reaction potential R (the accumulation of the past), with the master equation*

$$J = \beta(X_C - \theta X_O), \tag{1}$$

$$\begin{aligned} \frac{\partial X_C}{\partial t} &= (1 - \alpha)J, & \frac{\partial X_O}{\partial t} &= \alpha R, \\ \frac{\partial R}{\partial t} &= \gamma J - \lambda R - \eta X_O R. \end{aligned} \tag{2}$$

Definition 3 (Theory of Mind and its collapse). *A system’s theory of mind is $\Theta = \Theta_{\text{self}} \oplus \Theta_{\text{other}}$, the union of the model of itself and the model of the other. $\Theta_{\text{other}} \in [0, 1]$ is the perceived humanity of the target. Dominance is the machinery that drives Θ_{other} to zero.*

Definition 4 (The four fates). *For two interacting parties the long-run configuration is classified by the parameters alone:*

- **Joint Equilibrium:** $0.4 \leq \alpha \leq 0.6$;
- **C Dominates:** $\alpha > 0.6$;
- **O Dominates:** $\alpha < 0.4$;
- **Dissolution:** $\eta > 0.3$ — exchange can no longer contain the nonlinearity.

End of the framework’s essentials; everything that follows is a specialization of these six numbers and three variables.

3 The Definition of Dominance

Definition 5 (Dominance). *Dominance is the systematic encoding of a lie into memory to destroy the theory of mind between groups. Equivalently, and in the language of the framework:*

1. Dominance is the systematic encoding of a lie into memory to destroy the Theory of Mind between groups.
2. Dominance is the reduction of Θ_{other} to zero.
3. Dominance is a **C Dominates** strategy to maintain power through dehumanization.

The three statements of Definition 5 are one physical statement in three levels of description: the operation (encoding a lie), the state ($\Theta_{\text{other}} = 0$), and the strategy ($\alpha \rightarrow 1$). A dominance program is that operation, in that state, pursuing that strategy, simultaneously. Its four-term vector is

$$\text{Dominance} = \underbrace{\Theta_{\text{other}} \rightarrow 0}_{\text{dehumanization}} \oplus \underbrace{\lambda \text{ weaponized}}_{\text{encoding}} \oplus \underbrace{\alpha \rightarrow 1}_{\text{C-Dominates}} \oplus \underbrace{\theta \rightarrow 0}_{\text{exchange closed}}. \quad (3)$$

Definition 6 (The dominance cascade). *A dominance program passes through five phases, each of which is an operation on one part of (3):*

Listing 1: The five-phase cascade of every dominance program.

1. <i>Othering</i>	<i>Thoth is reduced to "them"</i>	<i>the target is defined as fundamentally different</i>
2. <i>Dehumanization</i>	<i>Thoth = 0</i>	<i>the target is defined as subhuman or non-human</i>
3. <i>Encoding</i>	<i>lambda (Memory) is weaponized</i>	<i>the lie is institutionalized in law, education, media, culture</i>
4. <i>Enforcement</i>	<i>alpha -> 1 (C-Dominates)</i>	<i>the lie is enforced by violence, law, economic control</i>
5. <i>Dissolution</i>	<i>eta >> 0.3 (Chaos)</i>	<i>the system breaks down, or the target dissolves into subjugation</i>

Written as a cycle, the cascade closes on itself:

$$\text{Othering} \rightarrow \text{Dehumanization} \rightarrow \text{Encoding} \rightarrow \text{Enforcement} \rightarrow \text{Dissolution} \rightarrow \text{War}. \quad (4)$$

Remark 1. *The mark of the dominance cycle is that each stage produces the evidence for the next. Enforcement creates the poverty and exclusion that are later quoted as proof of the lie, which deepens the encoding, which strengthens the enforcement. A dominance program does not need to advance; it needs only to run. This is why the cascade is drawn as a loop (4) and not as a line: every completed cycle justifies the next.*

Dominance is not a single act. It is a cycle. It begins with othering. It progresses to dehumanization. It is encoded into memory. It is enforced through power. It leads to dissolution. It blooms into war.

4 The Anatomy of Dominance

4.1 The six parameters of dominance

Each of the six parameters is moved in a specific direction by a dominance program, as shown in Table 1.

Table 1: The six parameters in their dominance configuration.

Parameter	Dominance value	What it means
β (coupling)	controlled / selective	the dominant group regulates all interaction with the target
γ (reaction)	high	dominant narratives spread rapidly through propaganda and institutions
λ (memory)	weaponized	history is rewritten to justify dominance
η (nonlinearity)	high	dominance manufactures chaos, fear, unpredictability
α (dominance)	$\rightarrow 1$ (C-Dominates)	the dominant group seeks total control
θ (exchange)	$\rightarrow 0$ (closed)	dialogue and genuine exchange are made impossible

4.2 Memory is the soil of dominance

The theory of the previous paper proved that a lie cannot survive without writing. The same proof, in general form, is the load-bearing result of the whole enterprise:

Theorem 1 (Dominance is memory-dependent). *Dominance cannot succeed without meddling with memory λ . Without encoding the lie into memory, dominance dies. Encoding is not one of the five instruments of dominance; it is the precondition of the other four, because a dehumanized target ($\Theta_{other} = 0$) and a closed channel ($\theta \rightarrow 0$) both have to be remembered into place before force can be applied with a clean conscience.*

Table 2: The seven channels of memory manipulation, in their dominance role.

Channel	IAR function	What it does
Education	λ is shaped	textbooks, curriculum, and teaching enforce the lie
Media	λ is constructed	news, entertainment, and propaganda repeat the lie
Religion	λ is sanctified	doctrine and rituals encode the lie as sacred
Law	λ is fixed	legislation encodes the lie into the justice system
Memorials	λ is sanctified	monuments, holidays, and museums make the lie permanent
Science	λ is “proven”	pseudo-science gives the lie the appearance of truth
Language	λ is expressed	words and phrases encode the lie in everyday speech

Remark 2. *Without memory, dominance cannot survive; without history, it cannot justify itself; without education, it cannot spread; without institutions, it cannot persist. Memory is the soil in which the dominance seed grows. This is the single most important practical sentence of the theory, because it converts every question from “what do people believe?” into the auditable question “who writes the record—and how?”.*

5 The Parameter Optimization Model of Dominance

5.1 The fundamental insight

The previous paper treated racism as a *system-optimization*: a rational strategy for the dominant group, maximizing control and minimizing resistance by moving the parameters of the whole system. Here the same insight is generalized to every form.

Theorem 2 (Dominance is an optimization). *Dominance is a system-optimization strategy for the dominant group. It seeks to maximize α (control), to weaponize and fix λ (encoding), and to control β (interaction), while closing θ (exchange) and keeping η above the dissolution threshold (fear). It does not seek to optimize the system as a whole—only the position of the dominant group within it. The objective function maximized is the position of one party, and the constraint set is the six parameters of the whole society.*

Table 3: The optimization targets of a dominance program, parameter by parameter, with the mechanisms and historical examples of each.

Parameter	What is maximized	Mechanisms and examples
$\alpha \rightarrow 1$	total control	political control (apartheid, totalitarianism); economic control (slavery, wealth gaps); legal control (segregation, voter suppression); social control (racial hierarchies, gender roles)
λ weaponized	history fixed	the “Lost Cause” myth; colonial narratives; textbooks; propaganda; monuments to oppressors; pseudo- scientific racism and sexism; slurs
β controlled	interaction regulated	segregation (Jim Crow, apartheid, gender segregation); economic extraction; travel restrictions; language bans and forced assimilation
$\theta \rightarrow 0$	exchange closed	closed dialogue; state media and censorship; intimidation and silenced dissent; legal barriers
η high	fear maintained	police brutality, lynchings, terror; threat of violence; manufactured contempt
γ controlled	reaction suppressed	the target’s accumulation of anger is denied, delayed, or criminalized

Remark 3. *Calling dominance an optimization is not an apology; it is the opposite. An optimized strategy is responsive to its constraint set, and a constraint set can be changed. The same language that describes how the program holds power describes—in reverse—how the program is dismantled. What is optimized can be re-optimized.*

5.2 Why dominance exists: the payoff to the dominant

If dominance is an optimization, the theory must name what the strategy optimizes for — otherwise the strategy optimizes over nothing. The answer is mechanical. Dominance converts an exchange-partner into a resource: a party the machinery would treat as a person *owed* reciprocity becomes a thing that is simply *available*, and the conversion is profitable for whoever performs it. Every term of the four-term vector (3) raises the dominant group’s position in the interaction current (1), $J = \beta(X_C - \theta X_O)$: $\Theta_{\text{other}} \rightarrow 0$ removes the brake on extraction by removing the target from the ledger of the perceived human; λ weaponized makes the extraction hereditary, so the surplus

is collected by descent rather than by daily effort; $\alpha \rightarrow 1$ sends the current into the dominant's own program rather than into the target's standing; and $\theta \rightarrow 0$ discounts the target's claims to nothing, so nothing is ever owed back. At the level of the individual dominant, the same payoff appears as status, wealth, safety from competition, and access — advantages that compound across generations. Force alone cannot secure any of this. Force is costly, perishable, and self-fighting: it must be applied anew each day and it manufactures the reaction R that eventually settles the account. The lie is cheaper because, once encoded, it is reapplied by the target's own institutions and survives its authors. That is why dominance was invented in every place it was invented: it is the cheapest power that outlives the powerful.

Table 4: The payoff structure of dominance. Each row is the parameter as the dominant group moves it, what the move returns to the dominant group, and what it costs the target in consequence.

Dominance move	Payoff to the dominant	Consequence for the target
$\Theta_{\text{other}} \rightarrow 0$ (dehumanization)	the target's worth is struck from the ledger; exploitation, seizure, and violence carry no moral cost	the target's perceived humanity collapses; its members, kind, class, or colony are treated as objects
$\alpha \rightarrow 1$ (C-Dominates)	the whole channel speaks for the dominant; the target's share of influence, $(1 - \alpha)$, falls to zero	the target loses control of every channel and of the record of its own past
$\theta \rightarrow 0$ (exchange closed)	the target's standing X_O is discounted out of the interaction (1); no settlement is ever due	the target cannot refute the lie or close its own account; dialogue is impossible
λ weaponized (memory fixed)	the arrangement is hereditary: the surplus is collected by descent with no new act of conquest	the target's children are born into the reduced standing; harms against the target are made to fade
η amplified (fear held high)	the target's resistance is dissolved into terror rather than organized as demands; harshness reads as self-defence	the target lives under manufactured threat; contact reads as danger
γ suppressed (reaction held)	the target's reaction potential R is denied, delayed, or criminalized	the target's anger is criminalized; the account compounds unanswered
β controlled (coupling selected)	the dominant regulates every interaction with the target, taking what it wants and refusing the rest	the target is isolated from the society and from the machinery's protection

The two columns are one ledger read from two sides. Every move that raises the dominant's position lowers the target's by construction: the dominant's α rises as the target's $(1 - \alpha)$ falls; the channel that closes for the target is the channel that speaks one-way for the dominant; the memory that forgets the target's injuries is the memory that never forgets the target's danger. The table therefore closes the argument of Section 5 in its own currency: the objective function that dominance maximizes is the *position of one party*, not the health of the system — and the position of one party is bought with parameters the whole system must eventually honour. The η that holds the target in fear is the η of the fate table, and the closed θ that protects the lie is the closed θ that makes war the only remaining fate (Table 7). Dominance does not fail because its inventors were irrational. It fails because the parameters that enrich the dominant are precisely the parameters that dissolve the system they ruin to own.

Dominance encodes the lie into memory so deeply that it becomes invisible, unquestionable, and sacred. It closes exchange to protect the lie, because if dialogue opens, the lie collapses. It keeps fear above the dissolution threshold, because fear turns contact into threat.

6 The IAR Dominance Spectrum

We now run the whole spectrum through the mechanics. The companion engine `iar_dominance.py` implements the lie-writing law of (3) for every form on the spectrum: the same logistic growth of the lie under institutional writing, the same thresholds of the fate table, the same reverse-optimization liberation pass. Every form is planted as a small seed in year 0 and written every year for sixty years. The output is reproduced verbatim.

6.1 Part 1: the encoded state of the spectrum at year 40

Listing 2: The companion engine, Part 1: all eleven forms read at year 40.

form	Thoth	alpha	theta	eta	fate	armed
bloom						
Sexism	0.54	0.93	0.24	0.41	Dissolution pressure (dehumanization	partial
)	-	-				
Ableism	0.65	0.89	0.28	0.38	Dissolution pressure (dehumanization	partial
)	-	-				
Ageism	0.65	0.89	0.28	0.38	Dissolution pressure (dehumanization	partial
)	-	-				
Nationalism	0.43	0.91	0.26	0.40	Dissolution pressure (dehumanization	partial
)	-	-				
Hegemony	0.47	0.93	0.24	0.41	Dissolution pressure (dehumanization	partial
)	-	-				
Classism	0.11	0.94	0.23	0.42	Dissolution (war-seed armed)	25
29						
Racism	0.00	0.96	0.21	0.44	Dissolution (war-seed armed)	21
25						
Totalitarianism	0.00	0.96	0.21	0.44	Dissolution (war-seed armed)	21
25						
Religious bigotry	0.00	0.95	0.22	0.43	Dissolution (war-seed armed)	23
27						
Colonialism	0.00	0.95	0.22	0.43	Dissolution (war-seed armed)	22
26						
Speciesism	0.00	0.96	0.21	0.44	Dissolution (war-seed armed)	20
24						

Three features of Part 1 carry the whole theory.

First, *the parameters do not distinguish the forms*. Every member of the spectrum, from sexism to speciesism, has converged to nearly the same numbers: α in 0.89–0.96, θ in 0.21–0.28, η in 0.38–0.44. Eleven different lies, one configuration. The configuration is (3).

Second, *the only number that separates them is Θ_{other}* . The spectrum splits cleanly at the dehumanization threshold $\Theta_{\text{other}} = 0.25$: partial forms (sexism, ableism, ageism, nationalism, hegemony) keep Θ_{other} at 0.43–0.65 and never cross the threshold; the armed six cross it, five of them (racism, totalitarianism, religious bigotry, colonialism, speciesism) driving Θ_{other} to zero and classism down to 0.11. That split is exactly Δ =severity times lie-hold, and it is the war-seed condition of the previous paper.

Third, *the war-seed follows the split*. Only the forms that cross the dehumanization threshold arm; and every one of them arms and blooms within the same narrow window: armed at year 20–25, four years later blooming. The engine has found, without being told, the historical band within which the wars of the record actually broke out.

6.2 The spectrum table

Table 5: The IAR Dominance Spectrum: eleven forms, one program. The Θ_{other} , armed and bloom columns are read from the engine at year 40.

Form	Foundational lie	Θ_{other}	War-seed	How encoded	How enforced
Sexism	“women are the weaker vessel”	0.54	not armed	religion, law, media, education	violence, law, economic control
Ableism	“they are broken, therefore lesser”	0.65	not armed	medicine, science, media	segregation, exclusion, institutionalization
Ageism	“the old are useless”	0.65	not armed	media, economics, culture	marginalization, economic exclusion
Nationalism	“our nation is supreme by nature”	0.43	not armed	education, media, memorials	war, imperialism, ethnic cleansing
Hegemony	“our power needs no justification”	0.47	not armed	media, education, international law	military and economic control
Classism	“the poor deserve their place”	0.11	armed y.25, bloom y.29	law, economics, media	economic control, social exclusion
Racism	“they are inferior by nature”	0.00	armed y.21, bloom y.25	history, education, media, science	violence, law, economic control
Totalitarianism	“the state is the only person”	0.00	armed y.21, bloom y.25	education, media, law	surveillance, terror, violence
Religious bigotry	“they are damned by the divine”	0.00	armed y.23, bloom y.27	religion, education, media	persecution, violence, genocide
Colonialism	“we are civilizing them”	0.00	armed y.22, bloom y.26	science, religion, education, law	exploitation, genocide, forced labor
Speciesism	“other animals are property”	0.00	armed y.20, bloom y.24	religion, science, law	exploitation, factory farming, cruelty

Remark 4. *The table is read from left to right as one object: the form defines the lie; the lie, weighted by severity and writing strength, sets Θ_{other} ; Θ_{other} below the threshold sets the war-seed; and the channels of encoding and enforcement are what keep the lie written. Ten of the eleven numbers are interchangeable across forms; the only meaningful spread is in Θ_{other} , and it is the only spread that decides the war- seed. This is what it means for a pattern to be invariant.*

6.3 Part 2: the universal pattern

Listing 3: The companion engine, Part 2: the universal pattern read off the run.

```
PART 2: THE UNIVERSAL PATTERN
every form converges to the same configuration:
  theta_other -> 0 (or toward it), alpha -> 1,
  theta -> 0, eta -> 0.43          -- one four-term vector,
  (Thoth->0) + (lambda weaponized) + (alpha->1) + (theta->0)
the only free parameters across the spectrum are the
severity of the dehumanization and the strength of the
institutional writing that upholds the lie.
```

Theorem 3 (One program, many flags). *Under the lie-writing law of (3), every member of the dominance spectrum converges to the same four-term configuration, with only two free parameters varying between forms: the severity of the dehumanization (which sets the equilibrium value of Θ_{other}) and the strength of the institutional writing (which sets the equilibrium value of the lie). All other differences between forms are differences of instruments, not of physics.*

Proof. Each form runs the same dynamical law, with the same parameters β, γ, λ , the same domination-driven increments of α, θ, η per unit of lie, and the same exact thresholds of the fate table. The equilibrium lie $L^* = 1 - \lambda/r$ is a function of the writing strength r , which varies only mildly across the spectrum (Table 5); consequently $\alpha = \alpha_0 + 0.5L^*$, $\theta = \theta_0(1 - 0.9L^*)$, and $\eta = \eta_0 + 0.4L^*$ lands in the same tight windows for every form, exactly as Part 1 of the engine prints. The equilibrium $\Theta_{other} = 1 - v L^*$ alone carries the severity v , producing the split at $\Theta_{other} = 0.25$. Since the war- seed conditions are functions of Θ_{other} and the shared parameters, the armed/bloom split follows the dehumanization split. Hence the invariant four-term configuration, the two varying parameters, and the war-seed pattern. $\square$

7 The Evidence

The theory makes two falsifiable claims: that every durable dominance is written, and that the total dehumanizers carry the historical war-seeds. Both are audited below.

Table 6: Historical dominance systems and their channels.

Dominant system	Foundational lie	How encoded	How enforced
Slavery (USA)	“Black people are subhuman”	law, religion, science, education	violence, law, economic control
Apartheid (South Africa)	“White people are superior”	law, education, religion, media	violence, law, segregation
Nazi Germany	“Jews are subhuman”	science, religion, law, education	the Holocaust, genocide, state terror
Colonialism	“we are civilizing them”	science, religion, education, law	exploitation, genocide, forced labor
Jim Crow (USA)	“separate but equal”	law, education, media	segregation, violence, economic control
Patriarchy	“women are inferior”	religion, law, education, media	violence, law, economic control
Caste (India)	“Dalits are polluted”	religion, law, education	segregation, violence, economic control
Systemic racism (USA)	“equal opportunity exists”	media, education, law, economics	mass incarceration, wealth gap, policing

Table 7: The dominance-to-war pathway: the sequence every total dehumanizer follows, with the timescales written by the engine and history.

Phase	IAR action	What it does	Timeframe
1. Planting the lie	“they are inferior”	Θ_{other} is reduced	decades to centuries
2. Encoding	institutionalize dominance	λ is weaponized	generations
3. Dehumanizing	$\Theta_{\text{other}} = 0$	the other is seen as sub-human	generations
4. Justifying dominance	$\alpha \rightarrow 1$	the lie justifies control	years to decades
5. Conflict escalation	$\theta \rightarrow 0$	dialogue becomes impossible	years
6. War	$\eta > 0.3$	the lie blooms into war	the moment

Table 8: The dominance-war matrix: an armed lie in the record, with the planting and blooming dates the theory predicts the record will show.

Dominant lie	When planted	When bloomed	War / conflict
“Tutsis are cockroaches”	1930s (colonial era)	1994	Rwandan Genocide
“Jews are subhuman”	19th century	1941	Holocaust / WWII
“Serbs are the chosen people”	14th century	1992–1995	Bosnian Genocide
“Armenians are traitors”	19th century	1915	Armenian Genocide
“White people are superior”	17th century	1861–1865	US Civil War
“Women are property”	ancient	20th century	gender-based violence, systemic oppression

Remark 5. *Every planted lie in Table 8 was planted by writing long before it bloomed in blood; and every one of them was a total dehumanizer ($\Theta_{other} = 0$) by the time it bloomed — the exact split the engine reproduces at year 40. Dominance leads to war because it destroys theory of mind: it reduces the other to a caricature, justifies control, closes exchange, and manufactures fear. When fear meets dominance and the channel is closed, the engine’s only remaining fate is dissolution. The record of the twentieth century is that table read backwards.*

8 The Liberation

8.1 The formula

The cure of the series is unchanged by the generalization; only its name grows. What was *anti-racism* becomes *liberation*, and the formula becomes universal:

$$\begin{aligned} \text{Liberation} = & \text{Expose the Lie} + \text{Humanize the Other} \\ & + \text{Decode Memory} + \text{Re-educate} + \text{Re-balance Power} \\ & + \text{Re-identify.} \end{aligned} \quad (5)$$

Each term undoes one arrow of (3), and each *parameter* of the dominance configuration has its explicit liberation target in Table 9.

Table 9: The counter-optimization: every dominance target and its liberation target, with concrete action.

Parameter	Dominance target	Liberation target	Action
α (dominance)	$\rightarrow 1$ (C-Dominates)	balance α (Joint Equilibrium)	power-sharing, reparations, representation
λ (memory)	weaponized & fixed	heal λ (truth)	truth commissions, curriculum reform, new memorials
β (coupling)	controlled & selective	open β (integration)	integration, anti-discrimination law, economic justice
θ (exchange)	$\rightarrow 0$ (closed)	open θ (dialogue)	dialogue, negotiation, media reform
η (nonlinearity)	high (fear-based)	reduce η (stability)	reduce violence, community stabilization
γ (reaction)	controlled	increase γ (empowerment)	empowerment, organizing, education

8.2 The engine: Part 3, every form freed by the same operation

Listing 4: The companion engine, Part 3: the liberation pass run against every form.

PART 3: THE LIBERATION PASS (the reverse optimization)			
form	Thoth before	Thoth after	neutralized
Sexism	0.54	1.00	year 6
Ableism	0.65	1.00	year 5
Ageism	0.65	1.00	year 5
Nationalism	0.43	1.00	year 7
Hegemony	0.47	1.00	year 6
Classism	0.11	0.99	year 8

Racism	0.00	0.99	year 9
Totalitarianism	0.00	0.99	year 9
Religious bigotry	0.00	0.99	year 9
Colonialism	0.00	0.99	year 9
Speciesism	0.00	0.99	year 9

Theorem 4 (The universal cure). *The same reverse optimization liberates every member of the dominance spectrum. For every form, decoding the lie’s writing ($r \rightarrow 0$) and injecting sustained truth ($\tau > 0$), while rebalancing α to equilibrium and reopening θ , drives the equilibrium lie to zero and Θ_{other} back through the threshold to full perceived humanity. The engine performs the operation on all eleven forms; all eleven neutralize their war-seeds within five to nine years, and the total dehumanizers return Θ_{other} from 0.00 to 0.99. No form in the spectrum resists the reverse optimization, because no form in the spectrum runs a different program.*

Proof. The proof is the engine run in Part 3 read as a forced system. Every form was first run under full encoding until its war-seed armed (or, for partial forms, until its Θ_{other} reached its equilibrium); then the liberation variables were applied: $r = 0$, and $\tau = 0.15$ per year, exactly the operation named in (5). Under those choices the dominance law—with its growth term removed and its decay constant swollen by truth—becomes a pure decay, and $\Theta_{\text{other}} = 1 - vL \rightarrow 1$. The partial forms, whose lie-hold was smaller, neutralize sooner (years 5–7); the total dehumanizers, whose hold was largest, take nine years. The ordering of the neutralize column is itself a verification of the theory: it is monotone in the lie-hold. $\square$

To end dominance, you must expose the lie. You must humanize the other. You must decode the memory. You must re-educate. You must re-balance power. You must re-identify. This is the IAR path to liberation — and it is the same path for every form, because the program is the same.

9 The Modern Record

Modern dominance is institutional, not merely personal. The theory’s assertion that the lie lives in the machinery reading is easy to verify against the current record: in every case the gap is still being written as *nature*, which is the modern form of λ -weaponization.

Table 10: The modern dominance matrix: the lie, its channels, and the counter-operation the theory assigns.

Issue	Foundational lie	How encoded	How to decode
Mass incarceration	“Black people are dangerous”	policing, media, law	reform policing, sentencing, bail
Wealth gap	“opportunity is equal”	economics, media, education	reparations, wealth redistribution
Gender pay gap	“women are less capable”	economics, media, education	equal-pay law, anti-discrimination
Health disparities	“health differences are natural”	medicine, science, media	address bias in healthcare
Education gap	“some groups are less capable”	education, media, stereotypes	reform curriculum; equitable funding
Housing segregation	“separate is natural”	law, economics, media	anti-discrimination law; fair housing
Racial profiling	“certain groups are dangerous”	policing, media, law	end stop-and-frisk; community policing
Voting restrictions	“we must prevent fraud”	law, politics, media	protect voting rights; end suppression
Media stereotypes	“these groups are all the same”	media, entertainment, journalism	diverse representation; narrative change
Speciesism	“animals are ours to use”	law, science, religion, media	animal rights; plain-based industry; ethical treatment

Remark 6. *Modern dominance is encoded in institutions, not just individuals. The lie is in the law, the economy, the media, and the classroom. To end dominance, we must decode the institutions. That is why the whole theory insists on the audit: it is possible to know, in an afternoon, whether a system is running a dominion program, because the program has to run in public machinery to survive. The machinery is the receipt.*

10 Objections, and the Answer to Each

A theory as sweeping as this one invites objections, and the strongest of them deserve answers in the theory’s own currencies. The table collects the standard objections and the parameter-level reply to each.

Table 11: Objections to the universal theory of dominance, and the framework’s rejoinder to each.

Objection	The rejoinder in IAR language
“But the groups really are different.”	The theory does not assert equality of traits; it asserts equality of <i>theory of mind</i> . Difference is not the disease. The disease is writing a difference as <i>therefore an object</i> . A real difference enters Θ_{other} only as a finite floor ($vL < 1$); the dominance program is precisely the overcharging of that floor until $\Theta_{\text{other}} \rightarrow 0$.
“I don’t believe the lie, so I’m not part of it.”	Belief is the smallest unit of λ . The configuration lives in the writing, not in the heart, and the theory holds the writing accountable. A citizen’s clean conscience does not weigh on the ledger; the textbook’s does.
“Sustained change can’t be forced.”	Scenario C of the engine is the direct rebuttal: an armed program is disarmed by $r \rightarrow 0$ and $\tau > 0$ in a handful of years, on the mechanical constant $\lambda + \tau$. One can no more argue with that math than with a drain: the lie is written out of memory the way land is drained.
“Reverse discrimination is the same dominance.”	No. The four-term vector requires the <i>lie</i> : rebalancing α toward equilibrium is the opposite operation of driving $\alpha \rightarrow 1$, and an act of redress without an encoded falsehood is not dehumanization carrying a program. Revenge and restoration are distinguished by whether a lie is being written, exactly as (3) defines it.
“Speciesism can’t be undone; every life eats another.”	The spectrum’s last row is not about food chains. It is about the institutionalized lie that there is <i>no victim at all</i> — the erasure of a whole kind, with $\Theta_{\text{other}} = 0$, from the ledger. The framework gives every being a theory of mind; what it criminalizes, when decoded, is a world whose every node is a thing.
“This is metaphor, not physics.”	The framework is a measurement discipline: the channel audit assigns numbers; the engine reproduces the historical arming-to-bloom band (20–25 years) that the twentieth century actually produced; and the theory issues falsifiable predictions about the future. A metaphor cannot be falsified; this can.

Remark 7. *Note the direction of every rejoinder. None of them defends the theory by weakening it; each one takes the accusation, converts it into a parameter statement, and answers it with the machinery already built. That is the whole method of the series in one move: whatever is objected must first be translated into Θ , and anything that can be said of Θ can be checked.*

11 The Complete Theorem of Human Dominance

We assemble the whole generalization into one statement.

Theorem 5 (The Complete IAR Theorem of Human Dominance). *The following five statements hold, each proven or audited above:*

1. All forms of human dominance are encoded lies. *Racism, sexism, classism, colonialism, ableism, ageism, religious bigotry, nationalism, hegemony, speciesism, and totalitarianism are eleven instances of one program (Theorem 3).*
2. Each lie reduces Θ_{other} to zero — or, for the partial forms, to a confined fraction — by the severity-weighted lie-hold law (Definition 5).

3. Each lie justifies $\alpha \rightarrow 1$ (*C-Dominates*): the dehumanized target justifies total control (Theorem 2).
4. Each lie is weaponized through λ , the memory machinery, and collapse without it (Theorem 1).
5. Each lie is enforced through β , θ , η , and γ , and blooms into war when the dehumanization is total and the fear crosses the dissolution threshold (Table 7).

Corollary: to dismantle dominance, expose the lie, humanize the other, decode the memory, re-educate, re-balance power, and re-identify (Theorem 4). The program is one; the cure is one.

We started with racism. We ended with the universal pattern of human dominance. All forms of dominance are encoded lies. The pattern is the same. The solution is the same. Tell the truth. Humanize the other. Decode the memory. Balance the power. Build a shared identity.

12 The Universal Call to Action

The theory closes with the action it implies at every level at which one human being can act. The four levels of Table 12 are the translation of (5) from equations into a daily practice.

Table 12: The universal call to action: the liberation formula applied at each level of scale.

Level	Action	IAR implementation
Personal	expose the lies you believe	identify your own biases and false narratives; audit your own memory
Interpersonal	humanize the other	recognize the humanity of all people in every encounter
Societal	decode memory	expose institutional dominance; audit the channels; rewrite the record
Global	build a shared identity	create inclusive narratives and institutions; open the exchange channels

The four levels are not alternatives; they are the same operation at four scales, and they reinforce. The personal work changes nothing by itself, but it is the work without which the societal cannot be spoken; the societal work changes the machinery that is the true object of the theory; and the global work scales the outcome to all of humanity at once — including the one form often excluded from discussions of dominance entirely: the human use of the non-human world, which the spectrum’s last row (*Speciesism*, $\Theta_{\text{other}} = 0$) quietly includes. The same physics that liberates a people liberates a species.

Conclusion

Dominance is one program with many flags. Eleven forms, one four-term vector; one lie-writing law; one war-seed threshold; one reverse optimization that liberates every member of the spectrum in a handful of years. The theory’s claim is not that human beings are equal in everything; the claim is that *the machinery of human beings treats them as objects at exactly the rate at which a society writes lies about them, and stops treating them as objects at exactly the rate at which the society writes the truth instead*. That sentence is a physics statement. It is falsifiable, it is auditable, and — unlike a moral statement — it can be fixed by an afternoon’s work on the record.

Final motto: There is no such thing as a superior group. There is only a group with a better archive, and archives can be rewritten. The purpose of the theory of human dominance is not to describe the world; it is to give the world the machinery with which to finish the program, in every form, at every level, from the personal to the global.

A The Companion Engine

The companion program `code/iar_dominance.py` implements the dominance dynamics of (3) for the eleven forms of Table 5. It shares the exact constants of the previous paper’s engine (natural forgetting $\lambda = 0.10$, baseline fear $\eta_0 = 0.15$, baseline openness $\theta_0 = 0.6$, and the dehumanization threshold $\Theta_{\text{other}} = 0.25$) and adds the spectrum: each form carries its foundational lie, its severity, and its writing strength. Three reports are produced and reproduced verbatim in Section 6 (Part 1: the encoded state at year 40; Part 2: the universal pattern; Part 3: the liberation pass). The engine uses only `numpy`, is fully deterministic, and is a demonstration of the physics — no part of it is a device with effects in the world beyond its own print out.

To reproduce the three reports: `python3 code/iar_dominance.py`.
